Medical Microneedling

Start your journey to
smooth skin.

Exceed™

Reveal your flawless skin

For those looking for a smooth complexion, microneedling is a minimally invasive* solution that stimulates collagen deposition.

The natural healing process causes the skin to:

- Create new collagen
- Reduce the appearance of facial wrinkles¹
- Treat facial acne scars²

What is microneedling

Microneedling, also known as percutaneous collagen induction (PCI), is a non-surgical treatment that uses very fine, short, sterile needles to create tiny punctures in your skin, prompting a natural, collagen-stimulating healing process that corrects flaws and improves skin quality. This minimally invasive* facial treatment is clinically proven to deliver an improvement over time for several different dermatologic conditions, including facial wrinkles and facial acne scars.

* Individual results may vary
The microneedling technique outlined in this brochure is for clinical practice only.

Clinically proven results for skin smoothing effects

Improvement in aging skin

Significant reduction of facial acne scarring³

Advantages vs. other anti-aging methods

- ✓ Epidermis (outer layer of skin) remains intact and is not damaged unlike more invasive treatments
- ✓ Low risk of post-inflammatory hyperpigmentation⁵
- ✓ The first dual-indicated microneedling treatment that is FDA-cleared for facial acne scars and facial wrinkles^{1,2}
